

## **Graduate Scholarship opportunities at Masdar Institute of Science and Technology in Abu Dhabi**

10 outstanding candidates from Germany can be nominated to apply to the Master's programs offered by Masdar Institute.

The Institute is centrepiece of the Masdar Initiative, a landmark project announced in April 2006 by the Government of Abu Dhabi to establish a global thrust dedicated to alternative energy and sustainability.

Masdar Institute was established in collaboration with the Massachusetts Institute of Technology (MIT). It aims to become a world-class, graduate-level institution that seamlessly integrates research and education to provide future leaders and critical thinkers in advanced energy and sustainability. The campus is located in the world's first sustainable city, Masdar City in Abu Dhabi, which will be powered entirely by alternative energy.

The Institute currently offers 7 Master of Science degrees in the following programs: Medical Engineering; Materials Science and Engineering, Water and Environmental Engineering, Computing and Information Science, Engineering Systems and Management, Electrical Power Engineering and Microsystems Engineering, in addition to an interdisciplinary PhD program.

Students accepted into the graduate programs receive a full scholarship that covers tuition, housing, transportation, air tickets and a monthly stipend among other expenses. In addition to the degree awarded by Masdar Institute, graduating students may also receive a certificate from MIT confirming that the degree matches MIT's excellent academic standards.

Applications from students are evaluated by Masdar Institute's committee, with the minimum requirements including a high grade point average, GRE score and TOEFEL/IELTS score.

More details on the academic programs, admissions, criteria and application procedure are available at [www.masdar.ac.ae](http://www.masdar.ac.ae)
